

## Administering Actor Workspace (AWS)

This guide describes the necessary steps to setup and administer the Actor Workspace Solution.

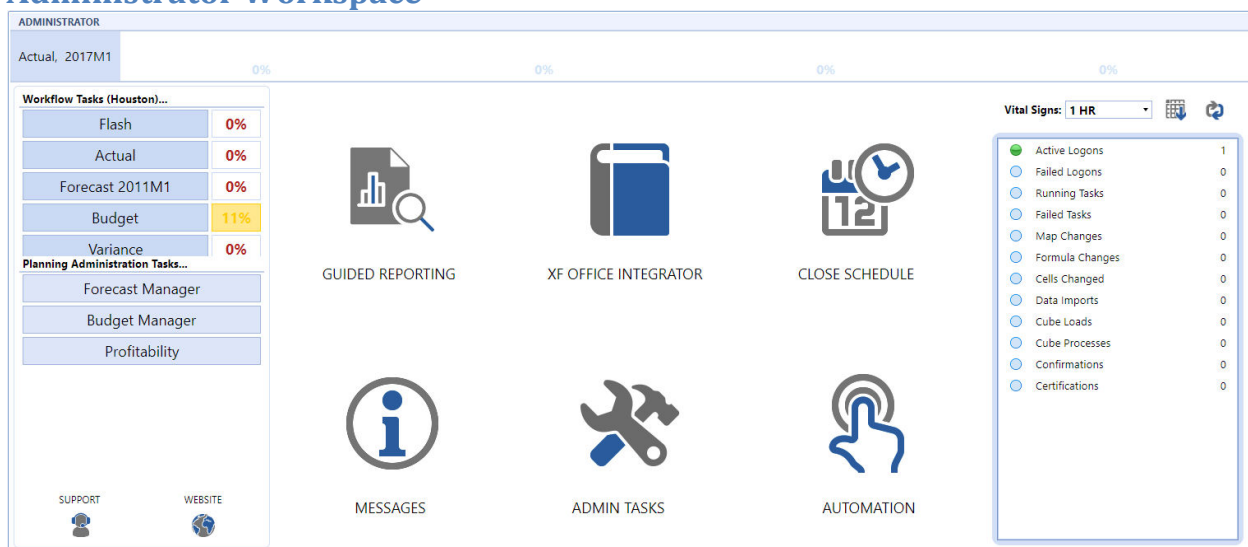

### Actor Workspace Overview

The Actor Workspace (AWS) Solution is a collection of predefined Dashboards that delivers custom content for different user types which include the Executive, Controller, and Administrator within an organization.

### Actor Workspace Components

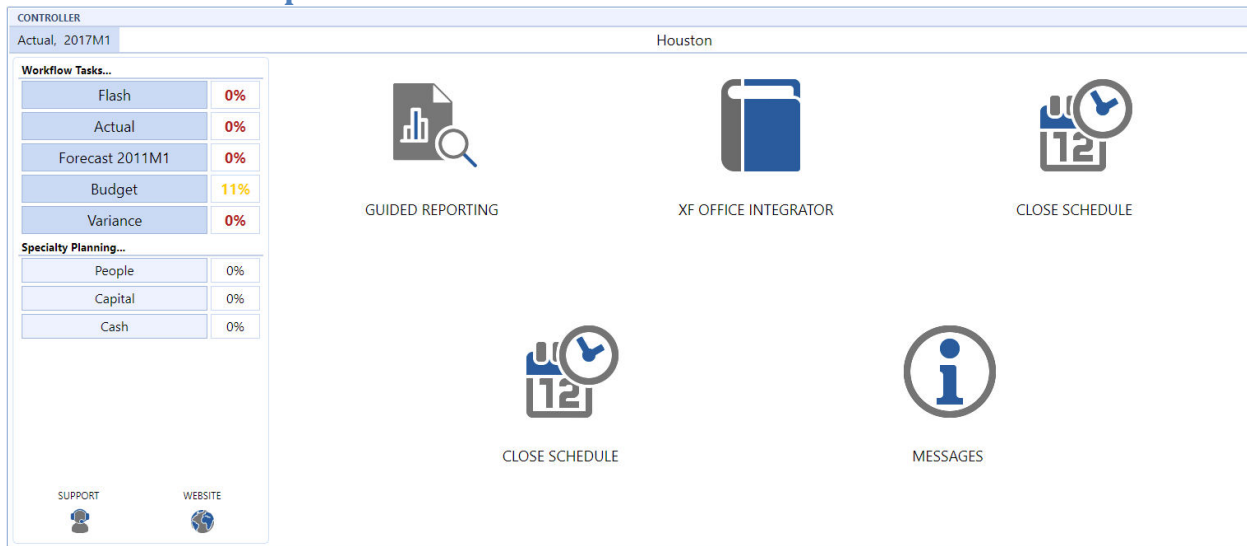

Actor Workspace contains three main actor home screens including Administrator, Controller, and Executive. Each of these contain different content focused on specific roles, duties, and activities.

### Administrator Workspace

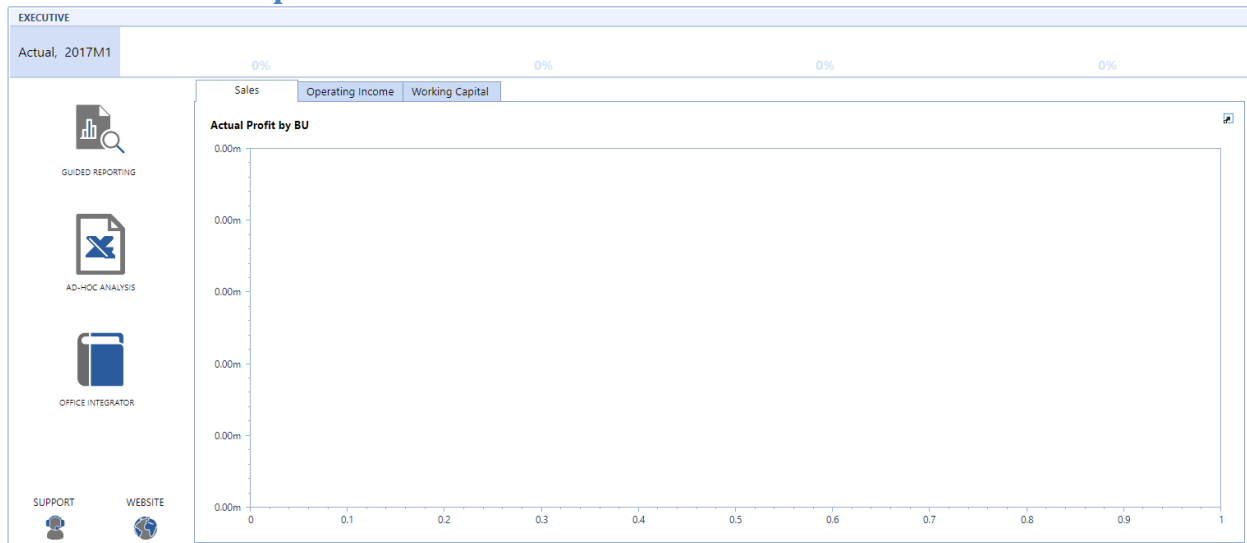

The Administrator Workspace displays Workflow and Calculation Status for multiple Business Units, vital sign details for the current application, enables launching to the users default Workflow Profile for multiple Scenarios, and it allows the administrator to launch tools such as Guided Reporting, Close Schedule and Automation.

## Controller Workspace

The Controller Workspace displays an icon which launches the close schedule for the current period, the default Workflow status for multiple Scenarios, and the current system notes. This Workspace also allows the controller to launch analysis tools such as Guided Reporting and Excel templates.

## Executive Workspace

The Executive Workspace displays the default Workflow status for four different Scenarios and customizable flash charts. This Workspace also allows the executive to launch analysis tools such as Guided Reporting and Excel templates.

## Actor Workspace Setup

Setting up Actor Workspace is broken into five main steps.

### Import Actor Workspace Package

The Actor Workspace package is a zip containing the Actor Workspace application files and is located in the OneStream XF MarketPlace. To add the Actor Workspace, log into XF, open the Application Load/Extract screen, and import the zip file.

**Note:** The Actor Workspace (AWS) Solution integrates content from Close Manager (CMR), Help Desk (HDK) and Guided Reporting (GRT) Solutions which are also available in the OneStream XF MarketPlace. These Solutions MUST be installed in order for the AWS to operate correctly.

### Actor Workspace Settings

Parameter settings for the XFW Actor Workspace (AWS) are set from the Actor Workspace Settings screen. These settings drive the content for Calculation and Workflow Status. Launch the Settings from the OnePlace dashboard link.

The screenshot displays the Actor Workspace Settings interface. On the left, a sidebar lists navigation options: Global Options (highlighted), Workflow Selection, Scenario Selection, and Uninstall. The main content area contains three configuration fields: 'Select Default Cube' with a dropdown menu set to 'GolfStream', 'Corporate Website' with an empty text input field, and 'Select Budget Year' with a dropdown menu set to '2018'. At the bottom right, there is a 'Save Settings' button with a floppy disk icon.

#### Global Options

Global Options include general settings for running the Actor Workspace

##### Cube Name

Enter the default Cube name

##### Corporate Website

Enter the web address for the company's corporate website (*if applicable*)

##### Budget Year

Enter the current Budget Scenario reporting year

## Workflow Selection

Workflows that drive calculation status displayed on the Executive and Administration home pages.

The screenshot shows a web interface for configuring workflows. On the left is a vertical navigation menu with the following items: Global Options, Workflow Selection (highlighted), Scenario Selection, and Uninstall. The main content area contains four identical sections for configuring workflows. Each section consists of a dropdown menu labeled 'Select Workflow X for Calc Status:' followed by a text input field labeled 'Enter Entity / Desc Associated with Workflow X:'. At the bottom right of the main area is a 'Save Workflows' button with a floppy disk icon.

### Workflow 1

Enter the first Workflow to display

### Workflow 1 Entity

Enter the Entity name / Description associated with Workflow 1

### Workflow 2

Enter the second Workflow to display

### Workflow 2 Entity

Enter the Entity name / Description associated with Workflow 2

### Workflow 3

Enter the third Workflow to display

### Workflow 3 Entity

Enter the Entity name / Description associated with Workflow 3

### Workflow 4

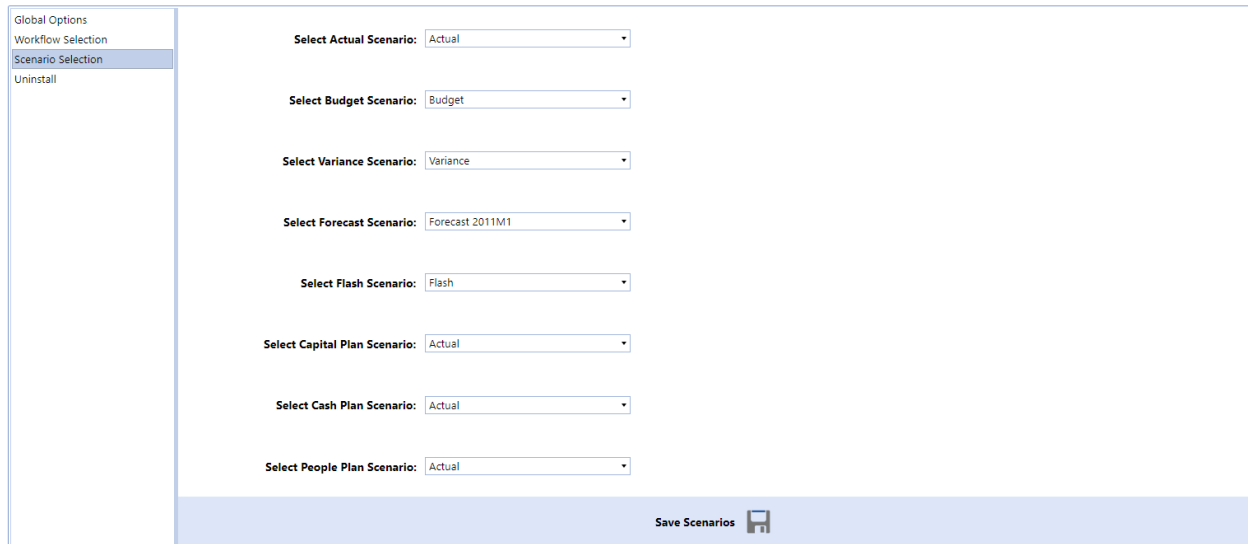

Enter the fourth Workflow to display

### Workflow 4 Entity

Enter the Entity name / Description associated with Workflow 4

## Scenario Selection

Scenarios that drive Workflow Tasks on the Administrator and Controller home pages.

The screenshot displays a web interface for scenario selection. On the left is a vertical navigation menu with the following items: Global Options, Workflow Selection, Scenario Selection (highlighted), and Uninstall. The main content area contains eight dropdown menus, each with a label and a selected value:

- Select Actual Scenario: Actual
- Select Budget Scenario: Budget
- Select Variance Scenario: Variance
- Select Forecast Scenario: Forecast 2011M1
- Select Flash Scenario: Flash
- Select Capital Plan Scenario: Actual
- Select Cash Plan Scenario: Actual
- Select People Plan Scenario: Actual

At the bottom right of the main content area, there is a "Save Scenarios" button with a floppy disk icon.

### Actual Scenario

Enter the name of the Actual Scenario

### Budget Scenario

Enter the name of the Budget Scenario *(if applicable)*

### Variance Scenario

Enter the name of the Variance Scenario *(if applicable)*

### Forecast Scenario

Enter the name of the Forecast Scenario *(if applicable)*

### Flash Scenario

Enter the name of the Flash Scenario *(if applicable)*

### Capital Plan Scenario

Enter the name of the Capital Plan Scenario *(if applicable)*

### Cash Plan Scenario

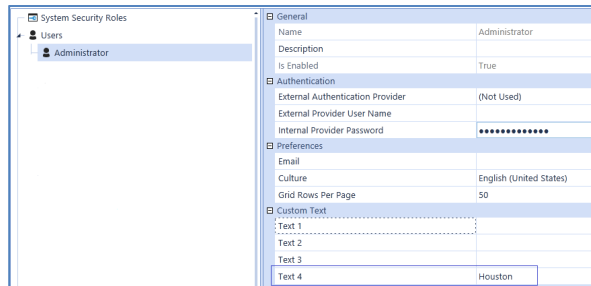

Enter the name of the Cash Plan Scenario *(if applicable)*

### People Plan Scenario

Enter the name of the People Plan Scenario *(if applicable)*

### Set Users Default Workflow

Setting the default Workflow for a user allows the Actor Workspaces to open a specified Workflow. To setup a default Workflow for a user, navigate to the user under Security and enter the name of the Workflow in the *Text 4* field. This value needs to be entered for users with the Controller and Administrator View Dashboards.

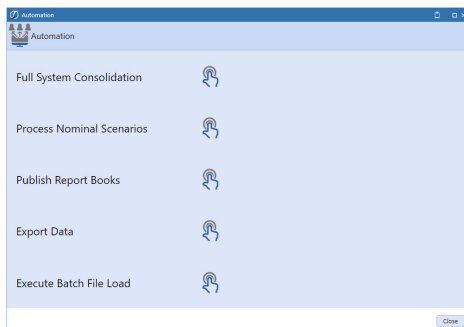

System Security Roles	
Users	
Administrator	
General	Name: Administrator
	Description:
	Is Enabled: True
Authentication	External Authentication Provider: (Not Used)
	External Provider User Name:
	Internal Provider Password: *****
Preferences	Email:
	Culture: English (United States)
	Grid Rows Per Page: 50
Custom Text	Text 1:
	Text 2:
	Text 3:
	Text 4: Houston

### Setup Automation Tasks

The Automation button on the Administrator View Actor Workspace launches an Automation interface. This screen allows administrators to run Data Management Sequences from the Actor Workspace Dashboards, however Actor Workspace (AWS) does not install any Data Management Sequences. To enable these buttons, Data Management Sequences need to be created in the XF Data Management screen and then assigned to the buttons for this Dashboard.

Once the sequences have been defined, they can be linked to the automation buttons.

To set these links, update the following Parameter Components:

- btn\_FullConsolidation\_AWSe1
- btn\_NominalizeScenarios\_AWSe1
- btn\_PublishReports\_AWSe1
- btn\_ExportData\_AWSe1
- btn\_ExecuteBatchLoad\_AWSe1

Update the *Selection Changed Server Task Arguments* with the name of the Data Management Sequence called by each button.

## Setup the Cube Views Used in Actor Workspace

In XF, select the Application tab and navigate to Cube Views. Actor Workspace Cube Views are located under XFT Workspace Executive (AWS) and XFT Workspace General (AWS). The Cube Views listed below need to be updated with the correct POV, the correct Entities under the Rows tab, and Accounts under the Columns tab.

### Cube Views Executive

The Executive Cube Views need to be updated with the appropriate POV and account list in order to correctly integrate with the host application. These Cube Views drive the charts shown on the Executive home page.

- **ActualProfitByBU\_Exec\_AWSe1**  
Displays profit by Business Unit where the Business Unit information is pulled from variables (*BU1Name\_AWSe1 - BU3Name\_AWSe1*)
- **ActualSalesByBU\_Exec\_AWSe1**  
Displays sales by Business Unit where the Business Unit information is pulled from variables (*BU1Name\_AWSe1 - BU3Name\_AWSe1*)
- **ActualWorkingCapital\_Exec\_AWSe1**  
Displays Working Capital by Business Unit where the Business Unit information is pulled from variables (*BU1Name\_AWSe1 - BU3Name\_AWSe1*)

### Cube Views General

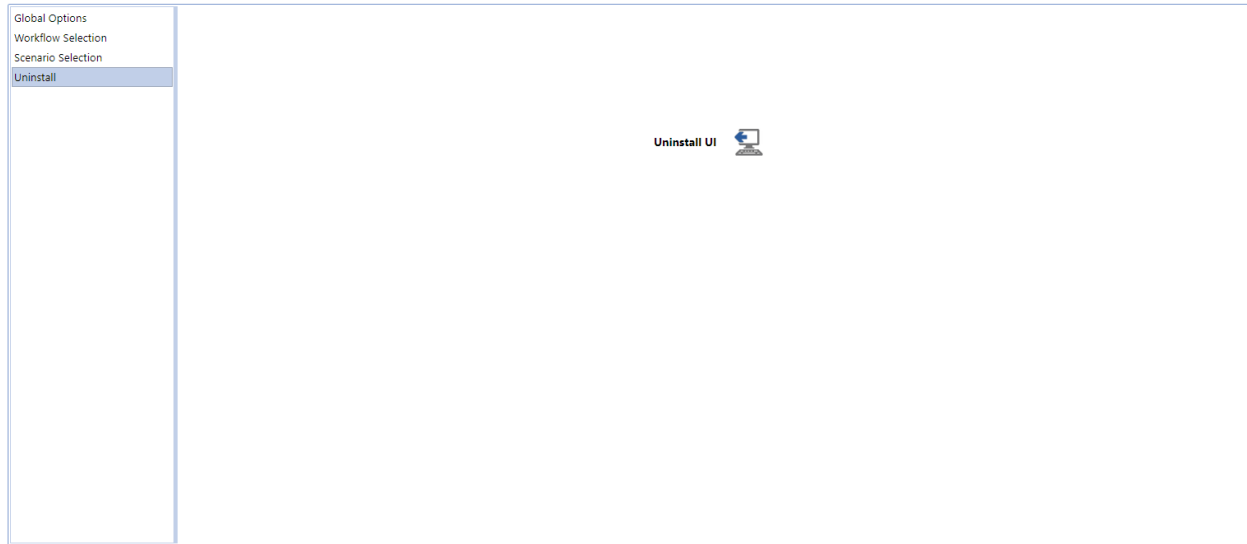

The General Cube Views need to be updated with the appropriate POV to correctly integrate with the host application. These Cube Views drive the status reports and indicators shown on the Executive and Administrator home pages.

- **CSActual\_Gen\_AWSe1**  
Used to drive the Calculation Status report
- **CSActualForStateIndicator\_Gen\_AWSe1**  
Used to drive the Calculation Status indicators

## Uninstall

The uninstall screen enables the removal of the Actor Workspace application.

### Uninstall UI

The Uninstall UI button opens a dialog to confirm removal of the Actor Workspace solution UI.

## Modifying MarketPlace Solutions

A few cautions and disclaimers when modifying a MarketPlace Solution:

- Major changes to Business Rules or custom tables within a MarketPlace Solution will not be supported through normal channels as the resulting solution is significantly different from the core solution.
- If changes are made to any Dashboard object or Business Rule, consider renaming it or copying it to a new object first. This is important because if there is an upgrade to the MarketPlace Solution in the future and the customer applies the upgrade, this will overlay and wipe out the changes. This also applies when updating any of the standard reports and Dashboards.
- If modifications are made to a MarketPlace Solution, upgrading to later versions will be more complex depending on the degree of customization. Simple changes such as changing a logo or colors on a Dashboard do not impact upgrades significantly. Making changes to the custom database tables and Business Rules, which should be avoided, will make an upgrade even more complicated.
