

DATA ENTRY 123

RELEASE NOTES

PV 440 SV 100

DATA ENTRY 123 PV440 SV100

The theme of this release includes usability improvements, modernization and defect resolution.

RELEASE DATE

February 14, 2020

DEPLOYMENT

This release requires an Uninstall UI for prior versions. There are database table changes but no loss of data unless Uninstall Full is chosen.

NEW

- Selector values displayed to the user can now be limited based on another Selector within the same Selector Bar.
 - For example, Entity filter value selected will limit the Accounts shown in the next filter.
- A Form no longer refreshes automatically after each filter value selection. Instead, a **Refresh** button is displayed allowing the user to control when to submit the filter values for the Form.
- Height and **Font Size** for each Selector in a Selector Bar are now definable.
- Forms within Workflow Profiles can be designated as **Required** or **Optional** Form Templates.
- Member Filter values can be displayed in their appropriate dimensional hierarchy.

CHANGED

- Selector 'width' has been moved from each Selector List to each Selector allowing adjustment of the filter size on each Selector Bar.
- Selector Lists will no longer support the use of the following SQL commands;
 - DBCC
 - UPDATE
 - DELETE
 - TRUNCATE
 - DROP
- Instructional file uploads are no longer limited to PDF. All types **except** XML are accepted.
- Saving Selectors with duplicated Dim Parameter Names will display error message. Before an error would happen upon Form 'Preview' when duplication occurred.

FIXED

- Custom Parameters now properly passed to the cube view for presentation in the Form.
- Changing between Workflow Profiles will only display Forms setup for that Workflow, rather than continuing to display the last Form from the prior Workflow Profile.
- Clicking **Cancel** in the Item Selector dialogue will no longer set the Selector filter value.

KNOWN ISSUES

None.

DATA ENTRY 123 PV430 SV101

The theme of this release is defect resolution and incremental improvements.

RELEASE DATE

February 22, 2019

DEPLOYMENT

This release supports an overinstall for versions above PV430 SV100.

There are no database table changes.

NEW

None.

CHANGED

When a Form is opened from a Workflow Channel, the last accessed Form and Form Group is presented.

FIXED

A caching issue was causing a previously accessed Form from one Workflow Channel to be presented when selecting a Form in a different Workflow Channel.

KNOWN ISSUES

None.

DATA ENTRY 123 PV430 SV100

The theme of this release is the initial Data Entry 123 solution launch.
